A Bitcoin’s sudden increase of values attracts money managers in the world. Bitcoin is a virtual currency, like the data packets that carry information on the internet via our cell phone. Japanese hucker Satoshi Nakamoto is alleged to invent Bitcoin by applying mathematical theory of cryptography. We can use Bitcoin for foreign currency payments, for example swapping dollars into Bitcoin and again into euros. Bitcoin allows the quick and cheap exchange, not only currencies but also other assets, good or service. However we have the problem due to no tax. It has risk of criminal uses such as drug traffic or money laundering. In anyway, Bitcoin might have a power to lead a drastic change in our future economic system. We should keep watching where Bitcoin is going to be.
